

STUDY PARTICIPANTS NEEDED

The Animal Behavior Clinic at Tufts University in collaboration with the National Human Genome Research Institute is currently enrolling:

- Bull Terriers (with tail chasing/spinning)
- German Shepherds (with tail chasing/spinning)
- Border Collies (with light/shadow chasing)
- Doberman Pinschers (with Acral Lick Dermatitis)

for a study regarding the genetic underpinnings of compulsive behavior. Dogs that are affected and unaffected with compulsive behavior are needed. You will be required to fill out a survey about your dog's behavior and a blood sample is needed. A visit to Tufts is not required. Owners of affected dogs will receive Tufts written treatment protocol for compulsive behavior.

If you are interested in learning more about this study, please contact Niwako Ogata at 508-887-4702 or niwako.ogata@tufts.edu.
